

Fiscal Year 2007/2008 Budget Highlights and Goals

County Clerk

FY2007 Highlights

- The Clerk's office converted from CidNet to DevNet software for the processing of tax extensions and the collection of delinquent tax sales. As with all conversion projects, this has taken much time and effort from staff. It appears that most of the issues have been addressed, but at this time we still have programming changes that need to be made.
- We continue to scan and index the marriage licenses on file in this office. As of July 1st, we are finishing 1999 and will continue to work backwards.

FY2008 Goals

- We look ahead to 2008 and the challenges that year 2 may hold with the tax processing software.
- We will continue to scan and index marriage licenses. Staff prefers to issue certified copies that can be retrieved electronically, so this encourages us to put as much time into this project as we can.
