Job Information

Job Title:

Quality Engineer

Job Description:

Provide Quality Engineering leadership for production through validation of manufacturing processes, recommendation and implementation of process improvements, failure analysis on returned product, quality data analysis, and applying effective corrective actions for continuous improvement results.

Quality Engineer Job Duties:

- Provides quality engineering support to production and development engineering, including validation activities, SPC & data analysis, control plans, report writing, and DFMEA / PFMEA as needed.
- Ensures that the products meet customer and defined regulatory requirements.
- Supports Product Engineers and Quality Manager on customer issues and communication as necessary on quality related issues.
- Participates in print and design reviews. Identify significant characteristics and develops appropriate

controls.

- Introduce and validate process improvements on assigned projects including procedures, QA methodologies, tooling, and equipment.
- Establish new product requirements, prototypes, conduct and oversee testing, risk/failure mode analysis.
- Verification and Failure Analysis of returned product, with required corrective action.
- Devises QA sampling procedures to ensure product quality, with associated quality data for analysis and improvement actions.
- Lead problem solving teams to address identified issues and develop improvement actions.
- Serve on project teams to provide QA oversight for new and revised manufacturing processes.
- Documents manufacturing procedures via process mapping within product groups.
- Participates in Quality System maintenance activities, such as CAPA, Internal/External Audits, Complaints, and other activities as needed.
