

The McHenry County Department of Health (MCDH) Communicable Disease program collects monthly report data on all Illinois Reportable Diseases as defined by the Illinois Department of Public Health (IDPH). This report summarizes the incident cases of all IDPH notifiable conditions during 2014. The frequency of incident cases are reported for each month. Incident cases include both probable and confirmed cases.

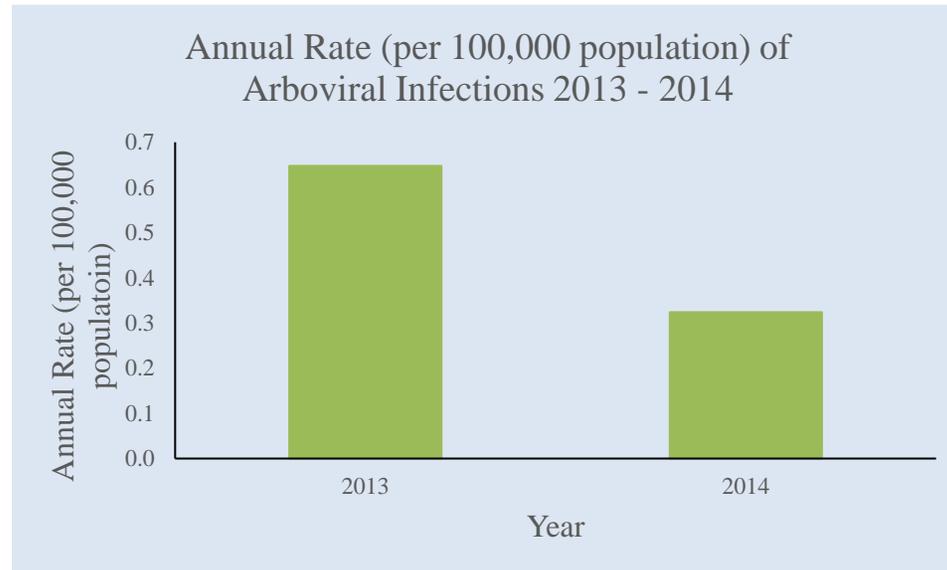

The 2014 total (2014 Annual Total) for each condition is calculated as the sum of the frequency of incident cases for all months. The 2014 annual rate for each condition (2014 Annual Rate) is reported as the annual rate of disease per 100,000 population (the 2010 McHenry County census estimate of 308,760 people was used in all calculations).

Reportable conditions are separated by disease category (arboviral infections, gastrointestinal illness, sexually transmitted diseases, tick borne diseases, vaccine preventable diseases, and other diseases). The sum of the 2014 totals for each condition are reported for each category and was used to calculate the annual rate of disease per 100,000 population for each disease category. Annual totals for each disease category from 2013 were used to calculate Annual Rate (per 100,000 population) for 2013. These were graphed to show trends in Annual Rate for each disease category from 2013 – 2014.

## Notifiable Conditions Report 2014

<b>Table 1. Arboviral Infections</b>	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	2014 Annual Total	2014 Annual Rate
California Encephalitis	0	0	0	0	0	0	0	0	0	0	0	0	0	0.0
