

McHenry County Weekly Influenza Surveillance Report Week 41: 10/7/2018 – 10/13/2018

McHenry County Department of Health (MCDH) tracks seasonal influenza using influenza-like illness (ILI)¹ surveillance reports. Influenza-associated intensive care unit (ICU) admissions; influenza-associated pediatric deaths; Influenza A, novel virus cases; and influenza outbreaks in long-term care facilities (LTCF) are reported to MCDH Communicable Disease staff. Hospital Emergency Room (ER) chief complaints (of fever and cough, fever and sore throat, or influenza) are tracked automatically through Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE). School absenteeism due to ILI are reported weekly to MCDH via an electronic form. All data are provisional and may change as more reports are received. MCDH thanks all of our surveillance partners for their help in collecting this information.

Influenza Summary for Week 41

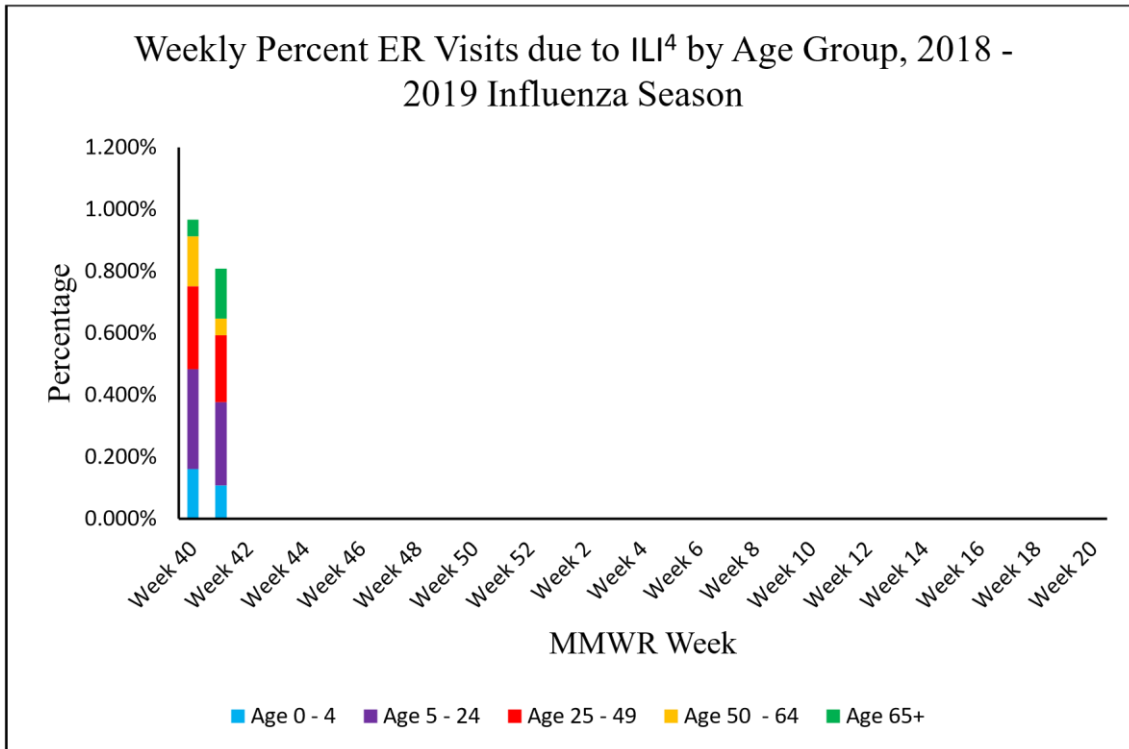

- Based on surveillance system indicators, influenza-like illness (ILI) activity in McHenry County is currently estimated to be low².
- No influenza-associated ICU admissions were reported.
- No influenza-associated pediatric deaths were reported.
- No influenza A, novel virus cases were reported.
- No influenza outbreaks were reported in long-term care facilities (LTCF).
- No clusters of increased ILI absenteeism were reported in schools.
- Illinois Department of Public Health (IDPH) reports **no activity** for influenza across the state. No activity is defined as no lab confirmed cases (for more information, see: <http://dph.illinois.gov/topics-services/diseases-and-conditions/influenza/surveillance>).

Week	Influenza-Associated ICU Admissions		Influenza-Associated Pediatric Deaths		Influenza A, Novel Cases		LTCF Influenza Clusters		Percent of ER Visits due to ILI ³
	Current Week*	Season Total**	Current Week*	Season Total**	Current Week*	Season Total**	Current Week*	Season Total**

McHenry County Week 41 Influenza Surveillance Report

Student Absenteeism

MCDH received absenteeism reports from 39 schools in our jurisdiction during Week 41. Data are collected on student absences due to ILI, student absences due to gastrointestinal symptoms, and total student absences. For Week 41, the average daily absenteeism rate due to ILI was 6.904 per 1000 students. No clusters of increased ILI absenteeism were reported in schools.

¹ ILI is defined as a fever $\geq 100^{\circ}\text{F}$ AND new onset of cough and/or sore throat (in the absence of a known cause other than influenza).

² ILI activity is defined as: low – minimal or no ILI activity detected, moderate – increased ILI activity, high – peak ILI activity.

³ Chief complaint in ER of fever and cough, fever and sore throat, or influenza.
