

McHenry County Weekly Influenza Surveillance Report Week 44: 10/28/2018 – 11/3/2018

McHenry County Department of Health (MCDH) tracks seasonal influenza using influenza-like illness (ILI)¹ surveillance reports. Influenza-associated intensive care unit (ICU) admissions; influenza-associated pediatric deaths; Influenza A, novel virus cases; and influenza outbreaks in long-term care facilities (LTCF) are reported to MCDH Communicable Disease staff. Hospital Emergency Room (ER) chief complaints (of fever and cough, fever and sore throat, or influenza) are tracked automatically through Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE). School absenteeism due to ILI are reported weekly to MCDH via an electronic form. All data are provisional and may change as more reports are received. MCDH thanks all of our surveillance partners for their help in collecting this information.

Influenza Summary for Week 44

- Based on surveillance system indicators, influenza-like illness (ILI) activity in McHenry County is currently estimated to be low².
- 1 out of 102 (0.98%) laboratory specimen tested positive for influenza: 1 (0.98%) for Influenza A, and 0 (0.00%) for Influenza B³.
- No influenza-associated ICU admissions were reported.
- No influenza-associated pediatric deaths were reported.
- No influenza A, novel virus cases were reported.
- No influenza outbreaks were reported in long-term care facilities (LTCF).
- No clusters of increased ILI absenteeism were reported in schools.
- Illinois Department of Public Health (IDPH) reports **sporadic activity** for influenza across the state. Sporadic activity is defined as isolated lab-confirmed cases OR lab confirmed outbreak in one institution (for more information, see: <http://dph.illinois.gov/topics-services/diseases-and-conditions/influenza/surveillance>).

| Week | Influenza-Associated ICU Admissions | | Influenza-Associated Pediatric Deaths | | Influenza A, Novel Cases | | LTCF Influenza Clusters | | Percent of ER Visits due to ILI ⁴ |
|------|-------------------------------------|----------------|---------------------------------------|----------------|--------------------------|----------------|-------------------------|----------------|--|
| | Current Week* | Season Total** | Current Week* | Season Total** | Current Week* | Season Total** | Current Week* | Season Total** | |
| 44 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0.83% |

*Total cases reported in week

**Total confirmed cases since 9/30/2018

McHenry County Week 44 Influenza Surveillance Report

Student Absenteeism

MCDH received absenteeism reports from 41 schools in our jurisdiction during Week 44. Data are collected on student absences due to ILI, student absences due to gastrointestinal symptoms, and total student absences. For Week 44, the average daily absenteeism rate due to ILI was 10.170 per 1000 students. No clusters of increased ILI absenteeism were reported in schools.

Week 44 School Absenteeism due to ILI by Municipality

McHenry County Week 44 Influenza Surveillance Report

¹ ILI is defined as a fever $\geq 100^{\circ}\text{F}$ AND new onset of cough and/or sore throat (in the absence of a known cause other than influenza).

² ILI activity is defined as: low – minimal or no ILI activity detected, moderate – increased ILI activity, high – peak ILI activity.

³ Laboratory data consist of Rapid Influenza Diagnostic Tests (RIDTs) conducted by surveillance partners.

⁴ Chief complaint in ER of fever and cough, fever and sore throat, or influenza.

⁵ Daily percent absenteeism due to ILI for each municipality = (sum of absences due to ILI for all reporting schools in the municipality) / (sum of the student body for all reporting schools in the municipality). Average daily percent absenteeism due to ILI (for each municipality) calculated as the mean of daily percent absenteeism due to ILI for Monday – Friday (excluding any day where all schools in the municipality were closed)
